Cannabis Bud at the state-of-the-art facility

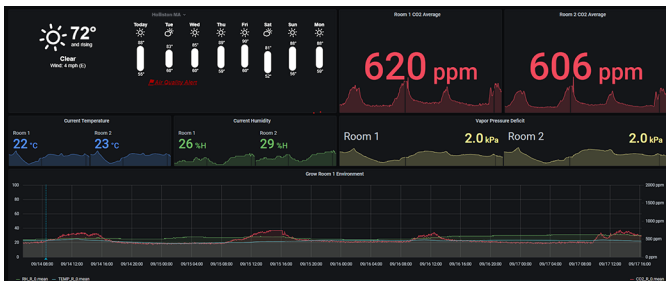

enVgrow is excited to announce the commissioning of our environmental control and intelligent CO₂ gas enrichment system in a new, high-tech cultivation facility in Holliston, Massachusetts.

enVgrow engineers programming custom control panel

Automatic safety valve, and CO₂ storage tank

enVgrow dashboard with analytics

For our multi-state operator client, enVgrow designed a robust, automated control system that allows them to set and collect data points on all monitored environmental components.

The enVgrow system retains historical data which is used to improve grows, create recipes, and achieve consistent results.

With intelligent CO₂ delivery, enVgrow provides the required monitoring and alerting for life safety within the building. enVgrow reviews all codes from AHJ and issues the mandatory commissioning documents for the system to be activated.
